

Cryptify Call

Total Control. Maximum Security.

Cryptify offers a cutting-edge communication system that seamlessly combines top-tier security with effortless user-friendliness in all aspects. Designed to meet the demands of modern organizations it offers a full suite of the essential features expected of today's communication platforms, including voice calls, video conferencing, messaging, document sharing etc. The application is easily deployed on your preferred standard devices running iOS, Android or Windows. Certified by independent third parties, Cryptify is the trusted choice of numerous governments, military forces, and enterprises, ensuring secure daily communications for operational continuity.

Communicate without compromise

Secure: All communication is protected by advanced end-to-end encryption.

Identity Authentication: The system ensures that each authorized user is assigned a unique and accurate digital ID. A verified identity is just as crucial as the end-to-end encryption!

Full Sovereignty: Complete and exclusive control over the communication system, including encryption keys and metadata. No external party has any insight, control, or access to your data.

Third-Party Certified: The communication system is approved for UK OFFICIAL and NATO RESTRICTED.

Shielded from data leaks under legislation: Cryptify AB operates under Swedish legislation, ensuring that no information is subject to disclosure due to laws such as EO12333, FISA, Cloud Act etc.

Support: High-quality support services for technical assistance whenever needed.

Governmental and military/defense industry approvals

Cryptify has been evaluated and approved by leading security governmental and military bodies for its products, code and processes. The Cryptify Call system is approved by

NCSC in UK for governmental communication at level OFFICIAL SENSITIVE and by NATO for communication at level NATO RESTRICTED.

The all-in-one encryption solution

Cryptify Call includes voice, video, messaging, conferencing and file sharing. All of the main communication means in one solution translates to less hassle and increased security.

Voice & video call

Any voice or video call is as easy as any other regular call on the phone. No extra steps, passwords or hoops & loops are needed.

Video conference

End-to-end protected conference calls with up to 50 participants with all the features in regular video conferencing applications.

Messaging & messaging groups

Enable users to address multiple recipients with a single message with replies sent to all group members. Up to 2000 members in a group. Attach photos, documents or videos to any message.

Distribution of contact lists

Enable users to easily create and share contact lists with other users.

Swift enrollment

Enables the administrator to enroll users in the system simply by providing a QR code.

Perpetual all-in-one user license

Full access to all app features.

Yearly support fee (optional)

Continuous app and system updates with new features. Technical support, if ever needed.

Values and benefits of Cryptify Call

Intuitive, easy-to-use and secure collaboration between individuals and groups. Increased usage of the system leads to a higher degree of protection for sensitive information, reducing the risk of data breaches and unauthorized access.

Use across devices and operating systems for a minimal learning curve as the user interface across functionalities mimic the device OS.

iOS Android Windows

Full set of features with everything from basic one-to-one voice calls and messaging to advanced video conferencing and screen sharing.

Absolute control of all key material with your own Cryptify Management System. The CMS operates off-line and hence is completely isolated from internet threats.

Full sovereignty over the system

with your own "on-premise" installation of the Cryptify Rendezvous Server. If you prefer, Cryptify can provide a managed service CRS based in Sweden.

Personal data protected against dominant international tech companies and foreign legislation such as US Cloud Act etc.

Federation of systems is an easy way to configure interworking between Cryptify customer's systems and thereby enabling secure collaboration between their workforces.
